Earli 2007, August 28 – September 1
Budapest, Hungary
Based on SNSF research project

Based on Swiss National Science Foundation (SNSF) research project "Adaptive Teaching Competency"

Research team:
- Erwin Beck
- Titus Guldimann
- Matthias Baer
- Sonja Bischoff
- Christian Brühwiler
- Peter Müller
- Ruth Niedermann
- Marion Rogalla
- Franziska Vogt
Overview

1. Introduction and main objective
2. The concept of adaptive teacher competency (ATC)
3. Research questions
4. Methods

5. Results:
   - Confirmatory Factor Analysis (CFA) of ATC
   - Correlations between ATC and classroom processes
   - Effects of ATC on students' learning progress

6. Conclusions
Introduction and aim of study

Context

- Constructivist understanding of learning (Stebler, Reusser & Pauli, 1994).

- Learning is multi-determined by students' preconditions, teaching, classroom context etc. (Helmke & Weinert, 1997)

- Large heterogeneity among students (e.g. prior knowledge, SES, migration background) (Corno & Snow, 1986; Coradi Vellacott & Wolter, 2005)

Main objective

Gaining a deeper understanding of the effects of (adaptive) teaching competency on classroom teaching and student learning.
Supplementary Context of School and Subject

Context of School and Subject

Characteristics of Educational System

Teacher Characteristics
- General characteristics (e.g., gender, teaching experience)
- Teaching competency
  - ATC (planning and teaching performance)
  - Beliefs and values
  - Motivation
  - Self-regulation

Classroom Context
- e.g., cognitive abilities of class, SES, migration background, heterogeneity, class size

Classroom Processes (Teacher Acting)
- Quality of teaching
- Quantity of learning opportunities
- Teacher-student relationship

Learning Environments
- Family, peers, media (e.g., SES, language spoken at home, migration background)

Individual Learning Preconditions
- Cognitive, motivational, emotional, self-related cognitions

Individual Learning Processes
- Students’ acting / mediation processes
- e.g., learning activity (use of learning supplies), learning strategies, attention and effort

Learning Outcomes (Objectives)
- Student achievement (general and domain specific)
- Cross-curricular competencies, e.g., SRL, problem solving, social competencies
Definition (cf. Wang, 1980; 1992)
ATC is defined as the teacher's ability to *adjust instruction to the individual learning processes* of pupils in such a way as to *create favourable conditions for each student's learning* for understanding (Beck et al., 2006).

Four dimensions (Helmke & Weinert 1997):
- Subject knowledge (SK)
- Diagnosis of students' learning (DG)
- Methods of instruction (MI)
- Classroom management (CM)

Two modes
- Lesson planning (ATC-planning)
- Teaching performance (ATC-performance)
Research questions

1. Can the theoretical structure of ATC be confirmed empirically? (construct validity)

2. What is the relationship between ATC and classroom processes? (criterion-related validity)

3. What impact does ATC have on student learning?
Sample

49 teachers of science classes (level 2)
- 26 primary (grades 4 & 5) and
- 23 secondary (grades 7 & 8) school teachers

Teaching experience: mean = 15.5 yrs (2 to 34 yrs)

898 students (level 1)
- 446 primary (age: mean = 11.5 yrs) and
- 452 secondary (age: mean = 14.5 yrs) school students
Methods of measurement*

Teachers:
- **vignettes** identifying teachers' ATC for lesson planning
- **video test** simulating instructional decisions to measure teachers' ATC for teaching performance
- **unit on a specific topic** ("germination of seeds" 4 lessons of 90 min. with predefined learning objectives) with assessment of
  - **subject knowledge** and **accuracy of diagnosis** of students' achievement

Students:
- **pre-/post-tests in unit** on "germination of seeds" measuring students' learning progress
  → using multi-matrix sampling (IRT scaling)
- **students questionnaires** (e.g. perception of classroom processes, learning preconditions, SES)
- **general science test**

*selection - as referred to in this paper
Video test: new experiment

Brühwiler & Vogt, Adaptive Teaching Competency, EARLI 2007
Instructions:

1. Please stop the video if you would act *differently* than the teacher.

2. What would you do differently?

3. Give an explanation for your reaction.

4. Continue watching the video and stop it each time that you would act differently.
Research questions

1. Can the theoretical structure of ATC be confirmed empirically? (construct validity)

2. What is the relationship between ATC and classroom processes? (criterion-related validity)

3. What impact does ATC have on student learning?
Measurement model of ATC
(one-factor CFA model)

chi-square=7.299; df=9; p-value=.606

Brühwiler & Vogt, Adaptive Teaching Competency, EARLI 2007
Measurement model of ATC (second-order CFA model)

chi-square = 7.147; df = 8; p-value = .521
CFI = 1.000; SRMR = .056; CAIC = 69.919; RMSEA = .000; pclose = .601

Standardized estimates
Measurement model of ATC (including content knowledge and accuracy of diagnosis)

subject knowledge "germination"  \[ -0.02 \text{ (n.s.)} \] accuracy of diagnosis  \[ 0.39 \] Adaptive teaching competency (ATC)

- \( e1 \): Plan_DG  \[ 0.34 \]
- \( e2 \): Plan_MI  \[ 0.25 \]
- \( e3 \): Plan_RSK  \[ 0.38 \]
- \( e4 \): Perf_DG  \[ 0.44 \]
- \( e5 \): Perf_MI  \[ 0.52 \]
- \( e6 \): Perf_CM  \[ 0.10 \]

chi-square=18.342; df=19; p-value=.500
cfi=1.000; srmr=.076; caic=100.429; rmsea=.000; pclose=.626

Standardized estimates

Brühwiler & Vogt, Adaptive Teaching Competency, EARLI 2007
ATC and teacher characteristics

Note: N = 47; *p<.05; **p<.01.

Dummy variables:
- stage (0 = primary school; 1 = secondary school)
- gender (0 = female; 1 = male)
- teacher experience (0 = less than 6 yrs.; 1 = 6 yrs. or more)

→ higher ATC for
- primary school teachers
- more experienced teachers
Research questions

1. Can the theoretical structure of ATC be confirmed empirically? (construct validity)

2. What is the relationship between ATC and classroom processes? (criterion-related validity)

3. What impact does ATC have on student learning?
### Correlations between ATC and classroom processes (class-level)

Research questions

1. Can the theoretical structure of ATC be confirmed empirically? (construct validity)

2. What is the relationship between ATC and classroom processes? (criterion-related validity)

3. What impact does ATC have on student learning?
Effect of ATC on students' learning progress

Note: Controlled for pre-test results; predictors are z-standardised.

- significant effect of ATC (1 SD $\rightarrow$ 1.75 points learning progress)
- effect of ATC due to primary school teachers
### Effect of ATC on students' learning progress controlled for context variables (multilevel analysis)

</tbody>
</table>

Note: N = 832 within 47 classes; ^~p<.10; *p<.05; **p<.01. Predictors are z-standardised. Dummy variables: gender (0 = female; 1 = male), language (0 = german, L1; 1 = others).
Effect of ATC on students' learning progress controlled for context variables (interpretation)

- **significant effect of ATC remains** after having controlled for individual context variables and class context
- **individual context** variables with positive effect on learning progress:
  - higher prior knowledge of "germination"
  - higher general science achievement
  - German (L1) spoken at home
  - and a tendency ($p < .10$) for female and higher SES
- **class context** variables with additional effect on learning progress:
  - higher average prior knowledge of "germination"
  - smaller class size
  - and a tendency ($p < .10$) for classes with a higher proportion of foreign language speakers
- no additional effect of average science achievement of class and SES of class
Conclusions

1. Data (collected through vignette and video test) fit the theoretically proposed construct; but no clear distinction between ATC-planning and ATC-performance.
   → construct validity

2. Positive correlations between ATC and
   - accuracy of diagnosis of students' achievement,
   - quality of instruction as perceived by the students (e.g. student participation, teaching quality), and
   - teacher-student-relationship (e.g. pedagogical engagement).
   → criterion-related validity

3. Students of highly adaptive teachers make greater learning progress than students of teachers with lower ATC; however, effect can only be shown for primary school teachers.
